

QUICK START GUIDE

1. Setting up the tent

To set up your tent, open the interactive map and click on your preferred spot. Detailed information about temperature, ground conditions, and more will help you make the best choice. When setting up your tent, ensure the poles are securely placed in the ground by adjusting their angle and applying the right amount of pressure.

2. Placing the protective cloths

To place protective cloths on your tent, start by opening the "Cloths" menu. Then, drag and drop the cloth to your preferred location on the tent. Alternatively, you can follow the system's recommendations, which are based on current weather conditions.

3. Setting up the Lights

To adjust the lighting, you can either customize it manually to match your ideal conditions (or apply suggested adjustments) or choose from preset lighting scenarios designed for special occasions. If you opt for manual customization, simply select the color, adjust the brightness using the slider, and you're all set. If you prefer a preset scenario, just select the desired option and save your changes.
